

# 2apphelp

Once you have connected your device with the other person **2app** is at your disposal. There are 2 main screens: **Inbox & Outbox**. You may swash between them horizontally:

## Outbox

Select what type of message you want to send: **Talk** for audio message. A record bar will appear at the bottom of the screen, you can start and stop your recording, when recorded you can send it, retake it or cancel this action.

**SHORTCUT:** audio makes sense in situations where you are not able or do not want to type (e.g. in a car, or when walking fast). To further simplify your audio recording use this shortcut: tap and hold the TALK button, after 1 second the button will become yellow, at this point release it, the button will turn red and your recording starts, when you tap again on the button the recording stops and will be immediately send to your partner.

**Text:** Tap on it and a text entry form appears on the bottom

**Pic:** Tap on it and the camera interface will appear; after you have taken a pic you may send it, retake or cancel the task.

**Clip:** Works pretty much the same as the pic mode but for videos. Videos are limited to 10 seconds.

**Call:** Once you have entered a phone number in the prefs screen you can call this number by tapping on the button. This will be a traditional phone call.

⚙️ Tapping on this icon will move you to the preferences screen explained below.

② The little coloured circles beside the text tell you that new messages of that type have been received and are shown in the Inbox.

IN You get to the Inbox by tapping on this icon or by swashing the screen to the left.

## Inbox

The Inbox shows incoming and outgoing messages in a timely order from top to bottom. Incoming messages are shown on the left, outgoing messages are on the right. Pics are shown as a thumbnail and by tapping on it you will see a full screen version.

Video and Audio messages are shown as a button with text info, tap on them to play the content.

You may scroll up and down through the Inbox. Only the first 300 messages are displayed in one chunk. You may access older messages by clicking on the text link at the top end of the messages list. A corresponding link leading you to newer or the newest messages will be shown on the bottom of the list.

✉️ This icon shown in outgoing messages means that the message is currently being delivered.

At the bottom of the Inbox you may enter text messages and by using the ➕ button you may select the other types of message types as well.

OUT You get back to the Outbox by tapping on this icon or by swashing the screen to the right.

## Preferences

**Status:** This shows you if your app is correctly paired with that of your partner. Within the pairing process your code will be shown here in case you forgot it.

**Themes:** You may choose one of 10 themes of **2app**. This will change the way Inbox and Outbox are displayed graphically.

**Call Shortcut:** Please enter a phone number here and you will find a call button as a shortcut in the Outbox. **2app** does not use this number and saves it on your device only.

**Disconnect:** If your love is gone you may use this feature. You will be disconnect from your partner and all previous messages will be deleted. You can then of course reconnect your app to another or the same person at any time. USE WITH CAUTION.

**Delete messages:** This will simply delete all messages from the app. You will be still paired with your partner.
